# DIVIDE

"TWO ROBOTS OCCUPY THE SAME SPACE, BUT LIVE IN COMPLETELY DIFFERENT VERSIONS OF IT"

ANFX301

# TOPIC & THEME RESEARCH

**Two robots share the same abandoned environment, but their contrasting perspectives cause them to interact with it in different ways.**

**Themes:**

- Subjective reality
- Conflict through misunderstanding
- Creation vs removal

**Why it matters:**

- How different perspectives shape outcomes
- Relevance to design thinking and interpretation

# AESTHETICS & TECHNOLOGY RESEARCH

**Aesthetics:**

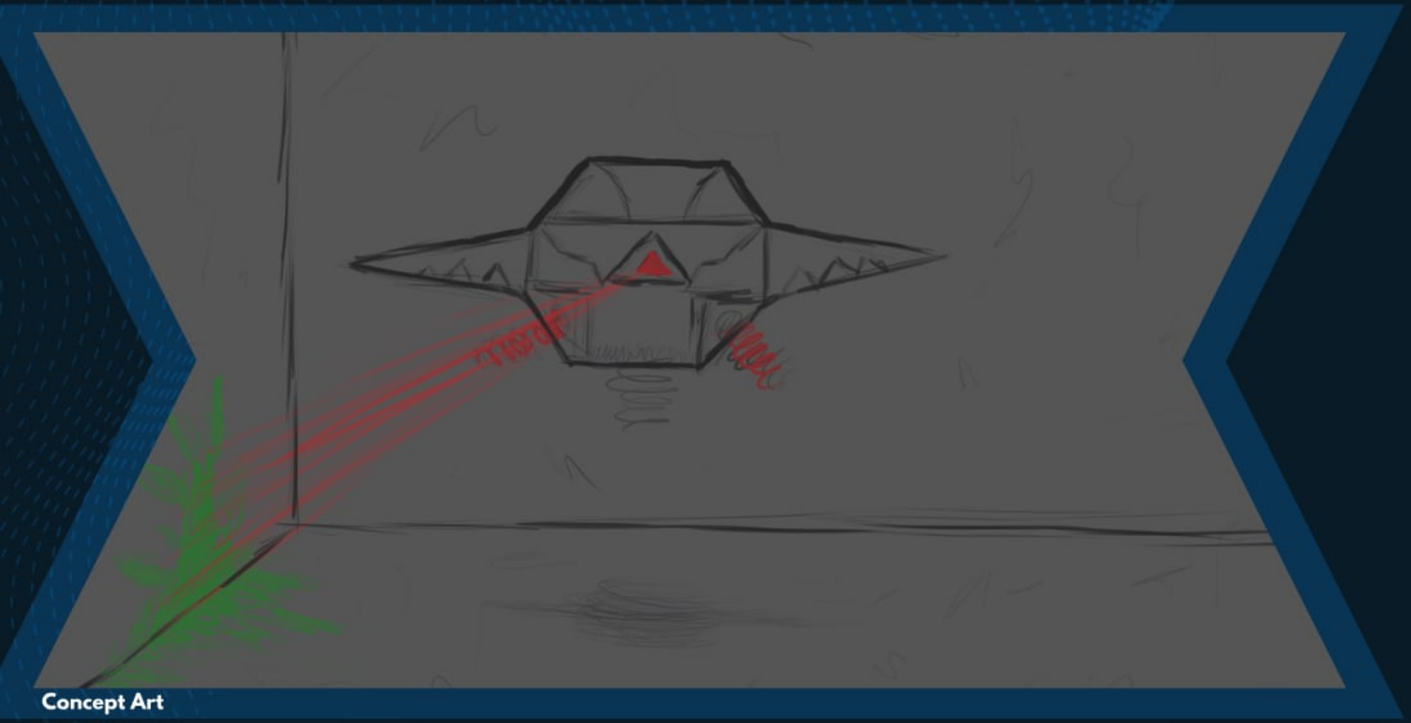

- Dark vs light contrast
- Cold vs warm lighting
- Minimal, cinematic environments
- Atmospheric fog and lighting

**Technology:**

- Unreal Engine (cinematics)
- Keyframe animation
- Lighting + post-processing
- Simple geometry + emissive materials

## SUMMARY

In a silent, abandoned structure, a dark robotic unit slowly removes debris and organic growth, restoring the space to a sterile state. Shortly after, a second robot enters, emitting soft light and introducing plant life back into the environment. As both robots continue their tasks, they begin to interfere with each other, one removing what the other creates. This silent conflict escalates through repeated interactions, transforming the space into a mix of decay and growth. The animation ends with a final wide shot, showing the unresolved tension between destruction and restoration.

# STORY SUMMARY

## LOGLINE

Two autonomous robots occupy the same abandoned environment but interpret it in different ways. As one removes elements and the other restores them, their actions begin to conflict. Their interaction shows how contrasting perspectives can reshape the same space.
